

TASK SYSTEM WEB

I want to allocate tasks to my employees so I need one system where I can manage the project & its tasks list. I am able to assign tasks to particular employees & can see the status of those tasks assigned to them. In the system, I am able to add new employees & same way I can remove the employees when they leave us. To analyse all progress I need one place where I can see updates of all tasks & can track the project progress. System should allow me to close the project once it finishes so it should not affect me when I analyse current on going projects.

Employee Information:

- Employee Name
- EmailID
- Password
- Profile Photo

Client Information:

- Client Name
- Email ID
- Contact Number
- Address
- Country

Project Information:

- Project Name
- Client Name
- Start Date
- End Date
- Budget
- Project Type (Hourly/Fixed Price)
- Priority
- Project Manager
- Members
- Description
- Documents

Task Information:

- Task Title
- Description
- Assign Members
- Due Date
- Priority
- Documents
- Label
